Madry's adversarial training

• Madry's adversarial training: Madry et al. (2018) proposed to incorporate the adversarial search inside the training process, by solving the following robust optimization problem:

$$\arg\min_{\boldsymbol{\theta}} \mathop{\mathbb{E}}_{(\boldsymbol{x}, y) \sim \mathcal{D}} \left\{ \max_{\|\boldsymbol{\delta}\|_{\infty} \leq \epsilon} L(\boldsymbol{\theta}, \boldsymbol{x} + \boldsymbol{\delta}, y) \right\}$$

Madry et al. Towards Deep Learning Models Resistant to Adversarial Attacks. ICLR, 2018.

Randomization

<□ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □

Random Self-Ensemble

• Random Self-Ensemble: Liu et al. proposed a "noise layer", which fuses output of each layer with Gaussian noise.

Liu et al. Towards Robust Neural Networks via Random Self-ensemble. ECCV, 2018.

Projection

Observation 1

Levina et al., 2005: The only reason any methods work in very high dimensions is that, in fact, the data are not truly high-dimensional.

Observation 2

Tanay et al., 2016: Adversarial samples do not lie on the data manifold.

 How to use the two findings to improve robustness of Deep Neural Network?

Li et al. Towards Robustness of Deep Neural Networks via Regularization. ICCV, 2021.

Deep Classifier: Framework

 $x \sim P_X$

KD adversarial detection

• **KD Adversarial Detection:** Feinman et al. proposed to detect adversarial examples by performing Kernel Density (KD) estimation in the subspace of deep classifier.

Feinman et al. Detecting Adversarial Samples from Artifacts. ICML, 2017.

Observation 1

Tanay et al., 2016: Adversarial samples do not lie on the data manifold.

Observation 2

A randomized network can lead to a distribution of hidden features, making it easier for detecting an out-of-manifold example.

- Our approach: detecting adversarial examples with Bayesian neural network
 - Bayesian neural network
 - Hidden output distributional differences

Li et al. Detecting Adversarial Examples with Bayesian Neural Network. 2021.

Bayesian Neural Network (BNN)

All weights are represented by probability distributions over possible values

▲□▶ ▲□▶ ▲ 三▶ ▲ 三▶ 三三 - のへで 22/29

• BNN: a probabilistic model $p(y|\mathbf{x}, \mathbf{w})$

(Blundell et al., 2015)

Why BNN not DNN?

Figure: Hidden Layer Output Distributions (HODs) of BNN on automobile class of CIFAR10. train: HODs of training examples from automobile class. test: HODs of test examples from automobile class. adv: HODs of adversarial examples predicted as automobile. The adversarial examples are generated by PGD.

BATer: Framework

Figure: Framework of BATER. k is the total number of hidden layers. d_j represents the distribution distance measured from j-th hidden layer. S is the index set of selected hidden layers.
